Memo: Temporary Relocation of Station SK-05 (Ban Phru)

Songkhla Lake Basin Air Monitoring Network (SLBAMN) · Ref. SLB-MEMO-2026-19 · 14 September 2026

To: Field technicians, data desk staff and site hosts, Hat Yai cluster · **From:** Dr. Chanida Yodsaeng, Network Manager
Subject: Move of Station SK-05 to a temporary site and handling of its data

1. Decision

Ban Phru Municipal School will re-roof Building 2 from 5 October to about 20 December 2026. Station SK-05 (on that roof since 2021, inlet at 11 m) will move to the car park of Ban Phru Sub-district Health Promoting Hospital, 1.2 km south-east, with the inlet on a 4.5 m mast. The last valid hour at the school is 2 October 2026, 23:00; removal is on 3 October and installation on 4 October. After a 48-hour check, data from the temporary site, code SK-05T, are published from 7 October 2026, 00:00. Return to the roof is planned for early January 2027, subject to the school's written confirmation.

2. How SK-05T data are handled

- From 3 to 6 October the public map shows SK-05 as "Station offline". SK-05T data are not merged into the long-term SK-05 series.
- While SK-05 is away, the Hat Yai district haze alert uses SK-02 (Kho Hong), trigger 50 µg/m³ PM2.5 (24-hour mean). The old 37.5 µg/m³ trigger was retired on 1 June 2026.
- An annual mean needs 75 % data completeness; SK-05 will reach about 68 % in 2026, so its 2026 mean is reported as "indicative".

3. Procedure for the move crew

1. Before power-off, download the logger memory and upload it to the SK-05 folder on the data desk drive.
2. Run a leak check and a flow check and write both results in the station log book.
3. At the new site, place the mast at least 20 m from the hospital's standby generator exhaust.
4. Check the flow is within ±4 % of 16.7 L/min. If not, do not start sampling and call the Field Operations Lead.
5. Send photos of the set-up from four sides to the data desk the same day.

4. Responsibilities

Arif Samaae, Field Operations Lead: crew schedule, the move itself, site keys and the access agreement with the hospital director. **Nuchanart Rattanaphum, Data Quality Officer:** reviews the 48-hour check and approves the start of SK-05T publication; she is the only person who may change the station status on the public map. **Data desk on duty:** watches SK-05T hourly and reports any gap over 3 hours to the Data Quality Officer. Crew travel claims: form FO-7, by 31 October 2026.
