Moving Home with Dwello: Handing Over, Resetting or Taking Your Smart Home Devices

Thaweesuk Digital Home Co., Ltd., Bangkok · Dwello Help Centre · Ref. DW-HC-0412 · Version 2.1 · Updated 14 September 2026

This help-centre article is for Dwello customers who are selling a house or condominium, moving out of a rental, or buying a home that already has a Dwello system installed. It replaces Version 1.4 of January 2026. Steps refer to the Dwello app version 5.8 or later on Android and iOS.

1. Before you start

Which devices does this article cover?

This article covers the Dwello Home Hub H3 and the older Home Hub H2, the Dwello Lock D7 door lock, Dwello Sense door and window sensors, Dwello Aircare wall thermostats and the Dwello Leakstop water shut-off valve. Dwello Eye indoor cameras are covered only where we say so; their recordings are handled under the cloud video rules in section 6.

Which devices should stay in the home?

Devices that are fixed to the building are normally part of the sale or the rental contract and should stay: the Lock D7, Aircare thermostats and the Leakstop valve. Plug-in devices such as the Home Hub, Sense sensors and Eye cameras can be taken with you unless your sale agreement says otherwise. Removing a Leakstop valve must be done by a licensed plumber, because the main water pipe has to be closed and refitted.

What are my options?

- **Handover Pass:** you pass the whole system, with its rooms, device names and automations, to the next owner or resident. Your personal data is removed. This is the best choice when the devices stay in the home.
- **Full reset:** every device is returned to factory settings and removed from your account. The next person sets everything up from the beginning.
- **Move Mode:** you keep your setup and take the hub and plug-in devices to your new address.

2. Using the Dwello Handover Pass

How do I create a Handover Pass?

1. Make sure the Home Hub is online and every device shows a green status dot in the app.
2. Open the app and go to **Home settings > Moving out > Create Handover Pass**.
3. Confirm your account password and the one-time code sent to your registered mobile number.
4. Choose what to keep for the next person. Automations and room layout are kept by default; scenes that use your personal phone location are always removed.
5. Give the 10-character Handover Pass code to the new owner, together with the hub's serial number printed under the base.

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

The new owner enters the code under **Add a home > I have a Handover Pass**. The code is valid for 72 hours after it is created. Until 30 June 2026 the code was valid for 7 days, but we shortened it after reports of codes being shared outside the sale. If the code expires, the original owner must create a new one; an expired code cannot be extended.

What is removed when I hand over?

When the new owner accepts the code, the following are deleted from the home and cannot be recovered: all Lock D7 PIN codes and fingerprints, the door entry history, family member accounts, guest access links and your notification settings. Lock key cards are not deleted automatically. We recommend you hand all key cards to the new owner, who should delete any missing cards under **Lock > Key cards** on the first day.

3. Doing a full reset

How do I reset the Home Hub H3?

First remove the home from the app under **Home settings > Remove this home**. Then press and hold the round button on the back of the H3 for 15 seconds, until the ring light flashes orange three times, and release it. The hub restarts in about two minutes and the ring light turns slow blue, which means it is ready for a new setup. Do not unplug the hub while the light is orange, as this can damage the firmware.

The older Home Hub H2 has no round button. Push a straightened paper clip into the pinhole marked RESET next to the power socket and hold it for 30 seconds.

How do I reset the Lock D7?

The Lock D7 can only be reset with its master card, the black card supplied in the box. Open the battery cover on the inside unit, hold the master card against the keypad and press the SET button for 5 seconds until you hear two beeps. The lock then deletes all users and returns to factory settings. If the master card has been lost, the lock cannot be reset by the owner for security reasons and a Dwello technician must visit with proof of ownership, such as a title deed copy, a sale contract or a tenancy agreement in your name.

4. Taking your devices with you

How does Move Mode work?

Turn on Move Mode under **Home settings > Moving out > Move Mode** before you unplug the hub. Move Mode saves your full setup in your account for 30 days. When you plug the hub in at the new address and connect it to Wi-Fi, the app asks you to restore the saved setup. After 30 days the saved setup is deleted and the hub must be set up as new.

5. Rentals and landlords

Can a landlord keep control of the devices?

Yes. Landlords should use a Dwello Landlord account, which is free. The landlord owns the home in the app and gives each tenant the Resident role with an end date that matches the tenancy. Up to 6

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

residents can be added to one home. While a Resident role is active, the landlord cannot view Eye camera feeds or the door entry history, but can still see device health and battery levels. On the end date the Resident role is removed automatically and all PIN codes created by residents are deleted at 12:00 noon.

Tenants moving out of a home owned by a Landlord account do not need a Handover Pass or a full reset. They only need to return the key cards and remove any of their own plug-in devices.

6. Subscriptions and cloud video

What happens to my Dwello Care subscription?

Dwello Care subscriptions belong to the person, not the home, and are not transferred with a Handover Pass. Dwello Care Basic costs 79 baht per month and includes 7 days of camera history. Dwello Care Plus costs 149 baht per month, or 1,440 baht if paid yearly, and includes 30 days of camera history, priority phone support and one free technician visit per year.

You can cancel at any time under **Account > Subscriptions**. Monthly plans stop at the end of the current month, with no refund for the remaining days. If you cancel a yearly Care Plus plan, we refund 120 baht for each full month that has not yet started, minus an administration fee of 200 baht. No refund is made if fewer than two full months remain.

A new owner who accepts a Handover Pass receives a 60-day free trial of Care Plus, once per home.

What happens to my camera recordings?

When you hand over or reset the home, your Eye camera recordings are not passed to the new owner. They remain in your account for 14 days, so you can download any clips you want to keep, and are then permanently deleted.

7. Getting help

How do I book a technician?

Book a visit in the app under **Help > Book a technician** or call the Dwello Help Centre on 02 118 4630, from 08:00 to 20:00 every day. Visits are available from Monday to Saturday and must be booked at least two working days ahead. A visit costs 450 baht in Bangkok, Nonthaburi, Pathum Thani and Samut Prakan, and 850 baht in all other provinces. The fee covers up to one hour of work; replacement parts are charged separately. Care Plus subscribers get one visit per year at no charge, in any province.
