Incident Report: Duplicate PlanAhead Scheduled Payments in the RimPay App on 25 September 2026

Rimping Thrift Bank Public Company Limited, Digital Channels Division, Chiang Mai · Ref. RTB-INC-2026-031 · Version 2.0 · Issued 1 October 2026

1. Summary

On the morning of Friday 25 September 2026, the monthly salary day for most of our customers, the PlanAhead feature of the RimPay mobile banking app executed a large number of scheduled transfers and bill payments twice. The duplicate debits were taken between 06:00 and 08:42, when the Digital Incident Manager, Sirinya Phromwong, paused all PlanAhead processing. Normal processing resumed at 13:15 the same day after a corrected scheduler had been tested.

No customer data was exposed and no money left the bank's control without a matching instruction from the customer. The problem was that one valid instruction was carried out twice. Every affected customer has now been refunded the duplicated amount in full, together with any fees and interest that the duplicate caused. Section 5 explains how customers can claim other costs, such as late-payment charges from another company.

Version 1.0 of this report was issued on 27 September; this version 2.0 adds the final refund figures and the corrected claim deadline.

2. Timeline

- **24 September, 22:30** – The PlanAhead scheduler is upgraded from version 4.1 to version 4.2 during a planned maintenance window. Post-release checks pass.
- **25 September, 05:58** – A network fault interrupts the link between the primary data centre in Mae Rim and the secondary data centre in Lamphun for about 40 seconds.
- **06:00** – The daily PlanAhead run starts. Both data centres begin processing the same batch of scheduled instructions.
- **06:47** – The first customer call about a double salary transfer to a family member reaches the RimPay call centre.
- **07:35** – Call volume reaches four times the normal level. The duty supervisor opens an incident with the Digital Operations team.
- **08:42** – Sirinya Phromwong pauses all PlanAhead processing. Instructions due later that day are held.
- **09:30** – An in-app banner and a push notification tell customers that some scheduled payments were taken twice and will be corrected.
- **11:10** – The cause is confirmed and the scheduler is rolled back to version 4.1.
- **13:15** – PlanAhead processing resumes. The held instructions are executed once each by 14:05.

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

3. Cause

Version 4.2 of the scheduler moved the check that prevents an instruction from running twice from the shared database into each data centre's local memory. When the network link failed at 05:58, the secondary data centre in Lamphun believed that the primary site was down and took over the daily run. The primary site in Mae Rim was in fact still working and also ran the batch. Because each site kept its own record of which instructions it had completed, neither site could see that the other had already paid them.

The test plan for version 4.2 did not include a network split between the two data centres during a live run. The release also went ahead the night before salary day, which the bank's change calendar marks as a "caution" date but did not at that time block.

> **Note.** Instructions created with the "Pay now" button, card payments and QR payments at shops do not use the PlanAhead scheduler and were not affected. Recurring loan repayments collected by the bank itself also run on a separate system and were taken once only.

4. Customer impact and refunds

4.1 Scale

On 25 September, 18,412 PlanAhead instructions were due for execution. Of these, 6,935 instructions were executed twice, belonging to 5,208 customers. The duplicated payments totalled 41.7 million baht. The largest single duplicate was a scheduled rent transfer of 186,000 baht; the median duplicate was 3,500 baht.

The duplicates fell into two groups:

- **Payments to accounts at Rimping Thrift Bank:** 4,102 duplicates. These were reversed automatically from the receiving accounts and returned to the customers by 14:00 on 25 September.
- **Payments to other banks and to billers:** 2,833 duplicates. These could not be reversed directly and had to be recalled through each receiving bank or biller. By 29 September, 2,391 of them had been returned. The bank is still pursuing the rest.

To avoid customers waiting for the remaining recalls, the bank credited every customer with an unreturned interbank or biller duplicate in full on 30 September. Any money recovered from the receiving side after that date is kept by the bank and is not taken again from the customer.

4.2 Fees and interest refunded automatically

Customers do not need to apply for the following. They were credited on 30 September and appear in the statement with the description "RTB-INC-031 REFUND":

- **Interbank transfer fee:** the 15-baht fee charged for each duplicate transfer to another bank.
- **FlexLine overdraft interest:** all interest charged on FlexLine overdraft balances between 25 and 30 September, whether or not the overdraft was caused by the duplicate.
- **Returned item fee:** the 50-baht fee for any other debit that failed for insufficient funds on 25 or 26 September.

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

From 1 August 2026 the returned item fee is 50 baht; before that date it was 80 baht. Because the incident happened after 1 August, refunds are made at the 50-baht rate.

> **Note.** Biller late-payment charges are not refunded automatically, because the bank cannot see them. They are covered by the claim process in Section 5.

5. How to claim other costs

Customers who had other costs because of a duplicate PlanAhead payment, for example a late charge from a utility company or a bounced cheque fee at another bank, can claim them back. Claims must be received by 31 October 2026. The first customer notice of 25 September gave a deadline of 15 October; this has been extended.

1. In RimPay, open **Help**, then **Report a problem**, and choose the topic **"25 September duplicate payment"**.
2. Select the affected PlanAhead instruction from the list. Only instructions due on 25 September are shown.
3. Enter the amount you are claiming and a short description of the cost.
4. Attach evidence, such as a bill showing the late charge or a statement from the other bank.
5. Submit the claim. You will receive a claim number starting with "DPC-" by push notification.

Customers who do not use RimPay for this purpose can make the same claim at any Rimping Thrift Bank branch using form RT-CL7, bringing their ID card and the evidence.

Claims of up to 5,000 baht are decided by the Customer Care team within 10 business days. Claims above 5,000 baht are referred to the Customer Care Review Panel, chaired by Wasan Thepsuriya, Head of Customer Care, and are decided within 20 business days. Approved amounts are paid into the account that the PlanAhead payment was made from.

6. Corrective actions

- **Duplicate guard (completed 27 September):** the scheduler again checks the shared database before every payment, and a new control rejects a second debit with the same instruction number within 24 hours. Owner: Head of Digital Channels, Natthawut Kaewprasert.
- **Salary-day change freeze (from 1 October 2026):** no changes to payment systems may be released from the 24th of each month to the 2nd day of the following month, except urgent security fixes approved by the Chief Information Officer.
- **Failover testing (by 30 November 2026):** a network split between Mae Rim and Lamphun will be added to the release test plan for all payment components. Owner: Digital Operations Manager.
- **Faster detection (by 15 December 2026):** an automatic alert will pause PlanAhead if the number of payments in a run exceeds the number of due instructions by more than 1 per cent.

7. Contact

RimPay call centre: 053 118 400, open 07:00 to 22:00 daily until 4 October 2026, then 08:00 to 20:00.
