Minutes of the Service Credit Review Panel, Meeting No. 4/2026

Lomfah Cloud Co., Ltd. · Ref. SCRP-04/2026 · Meeting held 24 September 2026 · Minutes approved 1 October 2026

Venue: Meeting Room 7B, Lomfah Cloud head office, Sathorn, Bangkok, with a video link to the Bang Na operations centre, 14:00–16:10. **Present:** Orawan Thepsiri (Head of Customer Assurance, chair), Kittipat Boonmee (Storage SRE Lead), Pimchanok Saelim (Billing Manager), Teerawat Inkaew (Legal Counsel). **Minutes:** Sasiwimon Jaidee (Customer Assurance Officer). **Apologies:** Narong Sukprasert (Head of Platform Operations).

1. Incident INC-2609-031: BlockVault degradation in zone BKK-2

Kittipat Boonmee presented the incident. On Saturday 12 September 2026, Lomfah BlockVault block storage in zone BKK-2 (Bang Na) had very high write latency and timeouts from 09:42 to 13:17, a total of 3 hours 35 minutes. The root cause was a firmware update (version 7.4.1) installed on two storage controller pairs during a maintenance window that should have covered only one pair. Service recovered after the firmware was rolled back to version 7.3.8. Zone BKK-1 (Lat Krabang) and the Chiang Mai zone CNX-1 were not affected.

- Affected customer accounts: 418, with 1,926 volumes on the two controller pairs.
- Measured monthly uptime of affected BlockVault volumes for September 2026: 99.50 %.

The public post-incident report was published on the status page on 19 September 2026.

2. Credit level for INC-2609-031

Under the Lomfah Cloud Service Level Agreement version 3.2, monthly uptime below 99.95 % gives a credit of 10 % of the monthly charge for the affected service, below 99.0 % gives 25 %, and below 95.0 % gives 50 %. With 99.50 % uptime, the standard credit for this incident is therefore 10 %.

Decision 4/2026-1. Because the outage was caused by a Lomfah change-control error and not by hardware failure, the panel agreed a goodwill uplift: customers on the Business or Enterprise support plan receive 15 % of their September 2026 BlockVault charge in BKK-2. Customers on the Starter plan receive the standard 10 %.

3. Claims: deadline and procedure

SLA version 3.2 has applied since 1 July 2026. Until 30 June 2026 (SLA version 3.1), a claim had to be filed within 14 days of the incident. Under version 3.2, a claim must be filed within 30 days after the end of the month in which the incident happened. For INC-2609-031 the panel confirmed that **claims must be received by 31 October 2026**. The procedure agreed for customers is:

1. Sign in to the Lomfah console with an account owner or billing administrator role.
2. Open Support, then Billing, then “Service credit claim”, and quote incident number INC-2609-031.
3. List the affected volume IDs, or tick “all BlockVault volumes in BKK-2”.

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

4. Billing confirms the credit amount by email within 10 working days of the claim.

Credits are not paid in cash. They are applied to the next invoice and expire 12 months after they are issued. Credits for one month can never exceed 50 % of the monthly charge for the affected service.

Note on unpaid invoices. SLA version 3.2 normally refuses credits to an account with an unpaid invoice more than 60 days overdue. For INC-2609-031 only, the panel agreed (Decision 4/2026-2) to accept the claim if every overdue invoice is fully paid by 31 October 2026, the same day as the claim deadline.

4. Escalated individual claims

- **Account LC-77214** (online retailer, Hat Yai, Business plan) asked for 50 % of its whole September bill because of lost sales. The panel declined: the SLA excludes lost revenue and other indirect losses. The account receives 15 % of its BKK-2 BlockVault charge, in line with Decision 4/2026-1.
- **Account LC-80533** (university research group, Starter plan) claimed for slow storage on 12 September. All its volumes are in BKK-1, which was not affected, so the claim was rejected. Kittipat Boonmee will check the latency logs for that day and reply to the customer directly.

5. Change process review and SLA version 3.3

Narong Sukprasert sent a written update: from 1 October 2026 every BlockVault firmware change needs a second approver from a different team, and changes may cover only one controller pair per maintenance window. The panel then discussed the draft of SLA version 3.3, planned to take effect on 1 January 2027. The main proposals are:

- Automatic credits, with no claim needed, for any incident that affects more than 100 customer accounts.
- A longer claim period for all other incidents: 60 days after the end of the incident month instead of 30.
- The credit tiers of 10 %, 25 % and 50 % stay the same.

Customers must be told about SLA changes at least 60 days before they take effect, so the customer notice has to go out by 2 November 2026. Teerawat Inkaew will deliver the final legal text of version 3.3 by 23 October 2026.

6. Action points

- Email all 418 affected accounts with the credit level and claim steps by 26 September 2026: Sasiwimon Jaidee.
- Set up the 15 % and 10 % credit codes in the billing system by 30 September 2026: Pimchanok Saelim.
- Reply to account LC-80533 after the latency log check by 2 October 2026: Kittipat Boonmee.
- Final legal text of SLA version 3.3 by 23 October 2026: Teerawat Inkaew.

Next meeting: Thursday 5 November 2026, 14:00, Meeting Room 7B, after the claim deadline has passed.
