Night Base-Load Walk-Down: Step-by-Step Guide for Tenant Floor Wardens

Nightwatt Energy Survey Co., Ltd., for the Building Management Office of Phet Pailin Tower, Khon Kaen · Ref. NES-KK-26-031, version 2 · Issued 19 October 2026

Phet Pailin Tower is an 18-storey office building on Mittraphap Road, Khon Kaen. As part of its 2026 energy audit, the Building Management Office has engaged Nightwatt Energy Survey Co., Ltd. to measure the building's night-time base load: the electricity that the tower keeps using when almost nobody is inside.

This guide is for the floor warden that each tenant has named for the audit. Version 2 replaces version 1 of 2 October 2026; the survey date has moved from Thursday 5 November to Thursday 12 November 2026 because of the Loy Krathong holiday arrangements.

1. Key facts about the survey night

- Survey night: Thursday 12 November 2026, from 20:00 to 04:00 on Friday 13 November.
- Base-load window: 23:00 to 03:00. During these four hours the main meter and every floor sub-meter are logged at one-minute intervals.
- Survey control desk: Meeting Room 3.07 on Level 3, staffed all night by Nightwatt and the building engineering team. Internal telephone extension 3307.
- Survey team: four Nightwatt auditors led by Chanakan Wongsuriya, Lead Auditor. The building's Chief Building Engineer, Pakorn Saengdao, joins them on the plant floors.

2. Before the survey night

1. **Confirm your floor warden.** Each tenant sends the name and mobile number of one floor warden and one deputy to the Building Management Office (bmo@phetpailin.example) by Friday 30 October 2026.
2. **Walk your floor during a normal working day.** Use the Nightwatt Floor Checklist (form NES-F4) to list every item that normally stays on overnight, including anything on a timer.
3. **Tag critical equipment.** Fix a red "DO NOT SWITCH OFF" tag to any item that must keep running.
4. **Return the checklist.** Email the completed form NES-F4 to the Building Management Office by Monday 9 November 2026 at 17:00. Floors whose checklist arrives late are still surveyed, but they do not receive a tenant floor report (see Section 5).
5. **Register any late workers.** Staff who must stay on a floor after 21:00 on 12 November are registered with the Building Management Office by Thursday 5 November 2026, giving names and expected leaving time. Each tenant may register up to 4 people.

3. During the survey night

Your warden or deputy must be reachable by mobile telephone from 20:00 to 01:00, and one of you must meet the Nightwatt auditors at your floor's lift lobby at the time given in the visit schedule. The schedule is emailed to wardens on Tuesday 10 November.

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

3.1 What the auditors do on your floor

- Walk the floor with the warden and compare what is running with the checklist.
- Fit plug-in meters to selected equipment. Each tenant floor gets up to 6 plug-in meters free of charge; they stay in place until 08:00 on Friday 13 November.
- Measure untagged items and, where useful, run a short switch-off test of up to 15 minutes on lighting circuits, water heaters or idle equipment to see how much the floor load falls.

3.2 Who decides what may be switched off

The floor warden points out equipment and answers questions, but does not operate building plant. Only the Lead Auditor, Chanakan Wongsuriya, may approve a switch-off test on a tenant circuit, and she does so only after the warden has agreed on behalf of the tenant. Base-building plant (air handling units, chilled water pumps, ventilation fans and lifts) is switched only by Pakorn Saengdao or a building engineer he names on the night. Tenants must never switch base-building plant themselves.

> **Equipment that is never switched off.** Anything with a red tag, all server and network equipment, refrigerators and freezers, fire and security systems and medical devices are measured with clamp meters or plug-in meters only. They are not part of any switch-off test, even if the tenant offers to allow it.

3.3 Staff working late

Registered late workers may stay on their floor until 23:00. From 23:00 to 03:00 floors must be empty so that the base load is clean; the only exception is building security and the survey team. Anyone not registered by 5 November is asked to leave the floor by 21:00.

4. After the survey night

1. Do not move or unplug the plug-in meters. A Nightwatt auditor collects them between 08:00 and 09:30 on Friday 13 November.
2. Report any equipment that failed to restart, or any item found switched off in the morning, to the control desk before 10:00 on 13 November.

5. Tenant floor reports and extra meters

Each tenant whose checklist arrived on time receives a two-page floor report by Friday 11 December 2026. It shows the floor's night load and the top five overnight consumers.

Tenants who want more than the 6 free plug-in meters may request extra meters on form NES-F4, in the "extra meters" box. Extra meters cost 350 baht each for the survey night and are invoiced to the tenant by the Building Management Office in December. In the 2024 survey the fee was 250 baht per meter, and only 4 meters per floor were free. Requests for extra meters after 9 November cannot be met.
