FitAgain Denture Repair and Reline Service: A Guide for Denture Wearers

Prasan Yim Dental Clinic, Phitsanulok · Patient leaflet PYD-LF-2026-07, version 2 · Valid from 1 October 2026

1. About the service

The FitAgain Denture Repair and Reline Service lets most patients of Prasan Yim Dental Clinic have an acrylic denture mended, adjusted or relined on the same day, without sending it away for a week. The service has its own small dental laboratory on the 2nd floor of the clinic building at 77/3 Boromtrailokanat Road, Mueang Phitsanulok, staffed by two dental technicians and supervised by our prosthodontist, Dr. Wilaiwan Chanthawong.

FitAgain is open to all denture wearers, including people whose denture was made at another clinic. Every denture is first checked by one of our dentists, because a denture that keeps breaking often no longer fits the gums underneath.

The service covers full (complete) and partial dentures with a pink acrylic base. Partial dentures with a metal framework can be repaired too, but the metal work is done by our partner laboratory in Bangkok and takes 7 working days, so these repairs are never same-day.

2. Opening hours and same-day cut-off times

The FitAgain laboratory is open Monday to Saturday. It is closed on Sundays and on public holidays. To have your denture back on the same day, you must hand it in at reception before the cut-off time:

- **Monday to Friday:** laboratory open 08:30–18:00. Hand in by 11:00; the denture is ready for collection from 16:30.
- **Saturday:** laboratory open 08:30–15:00. Hand in by 09:30; the denture is ready for collection from 14:00.

Until 30 September 2026 the weekday cut-off was 10:00. It has moved to 11:00 because the laboratory now has a second curing unit. Dentures handed in after the cut-off are normally ready by 12:00 on the next opening day.

> **Note.** Hard relines and the addition of a tooth after an extraction need an impression taken by the dentist first. On weekdays these are still same-day if the denture is handed in by 11:00, but they are not offered on Saturdays.

3. Services and prices

All prices below are per denture and include the laboratory work and a short fit check by the dentist when you collect it. Every visit starts with an assessment by the dentist, which costs 300 baht; this assessment fee is waived if you go ahead with the repair or reline on the same day.

- **Crack or fracture repair:** 900 baht for a single crack or a denture broken into two pieces. A denture broken into three or more pieces costs 1,400 baht to repair, if the dentist agrees that it can be repaired.

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

- **Re-attaching or replacing a tooth:** 600 baht for the first tooth and 250 baht for each additional tooth on the same denture.
- **Clasp repair or replacement** (the metal wire hook on an acrylic partial denture): 750 baht per clasp.
- **Adding a tooth after an extraction** (acrylic partial dentures only): 1,200 baht per tooth, including the impression.
- **Soft reline:** 1,800 baht. A soft cushioning layer is added at the chair in about 45 minutes. It is a temporary measure that normally lasts around 3 months.
- **Hard reline:** 2,900 baht. The fitting surface is rebuilt in the laboratory with new acrylic after an impression. The denture is out of your mouth for about 4 hours.
- **Ease and polish adjustment** (sore spots, rough edges): 400 baht, usually done in 20 minutes.

If a denture has been glued at home, the laboratory must grind away the old glue before it can repair the break. A cleaning fee of 500 baht is then added to the repair price, and in some cases the pieces no longer fit together and a new denture is the only option.

4. If your denture breaks: what to do before you come

Please follow these steps so that we can repair the denture quickly and accurately:

1. Take the denture out and stop wearing it.
2. Do not glue, tape or file the denture yourself. Household glue and super glue spoil the edges of the break and may make a repair impossible.
3. Collect every piece, including any tooth that has come off, even if it is very small.
4. Wrap the pieces in a clean, damp tissue and put them in a closed box or denture case. Never put them in hot water.
5. Call the FitAgain desk on 055 241 380 (or send a message on LINE to @prasanyim.fitagain) to say you are coming. Calling ahead is not required, but it lets us keep a laboratory slot for you on busy days.
6. Bring the denture, your ID card and, if you have one, your Golden Smile membership card to reception on the ground floor.

5. What happens on the day

At reception you receive a queue number and a FitAgain ticket. The dentist examines your mouth and the denture in Room 106 and explains what can be done and what it will cost. You must agree to the price before the laboratory starts work. If a hard reline or an added tooth is needed, the dentist takes an impression during the same appointment.

While the denture is in the laboratory you may wait in the patient lounge on the 2nd floor, or leave and come back later. When the work is finished, the laboratory sends you a text message. Collect the denture at the laboratory window in Room 204 by showing your FitAgain ticket; the dentist then checks the fit and bite with you for about 10 minutes before you leave. Dentures that are not collected on the same day are kept at the laboratory window for up to 30 days.

Patients who cannot travel can use the home collection service in Mueang Phitsanulok district on Tuesdays and Thursdays. A clinic driver collects the denture in the morning and returns it the next

working day; the fee is 250 baht each way, on top of the repair price. Home collection is not available for relines or added teeth, because these need the patient in the dentist's chair.

6. Relines: soft or hard?

A reline fills the gap that forms between the denture and the gums as they shrink over the years. The dentist will advise which type suits you:

- A **soft reline** is suitable when the gums are sore or still healing, for example in the first weeks after a tooth has been removed. It is replaced or followed by a hard reline later.
- A **hard reline** is a longer-term solution for a denture that is still in good condition but has become loose. After a tooth has been extracted, you must wait at least 8 weeks before a hard reline, so that the gum has time to settle.

Before a reline appointment, please do not use denture adhesive for 24 hours, and try to wear the denture for at least 2 hours before you come, so that the dentist can see where it presses.

7. Our repair guarantee

Crack and fracture repairs, tooth replacements and clasp repairs are guaranteed for 90 days from the date of collection. If the denture breaks again along the same line within this period, we repair it once more free of charge. The guarantee does not apply if the denture was dropped or stepped on, if it was glued or altered at home or by another provider after our repair, or if the new break is in a different place.

Hard relines include free ease and polish adjustments for 6 months after the reline. Soft relines are not guaranteed, because they are temporary by nature. The guarantee never covers a lost denture.

Note. Metal-framework repairs made by our partner laboratory carry that laboratory's own guarantee of 60 days, not the 90-day FitAgain guarantee.

8. When a new denture is the better choice

Dr. Chanthawong and her team will usually suggest a new denture if your denture is more than 7 years old and has become loose, or if it has needed three or more repairs in the past 12 months. A new complete denture at Prasan Yim costs from 14,500 baht per arch and takes 4 visits over about 5 weeks.

If you order a new denture within 60 days of a FitAgain repair, the price of that repair is deducted from the price of the new denture. Reline charges and home collection fees are not deducted.

9. Payment, discounts and contact

We accept cash, debit and credit cards and QR payment. Holders of the Golden Smile card, the clinic's free membership for patients aged 60 and over, receive a 10% discount on repairs, tooth replacements, clasps and adjustments. The discount does not apply to relines, new dentures or the home collection fee.

For questions about the laboratory, contact Narong Phuangkaew, Dental Laboratory Coordinator, on 055 241 380 (extension 204) or at fitagain@prasanyim-dental.co.th.
