Help Centre: Recovering Deposits Sent on the Wrong Network or Without a Memo Tag

Phalang Digital Asset Exchange Co., Ltd. (PhalangX), Bangkok · Article HC-DEP-112 · Version 3 · Updated 14 September 2026

This article explains what PhalangX can and cannot do when a customer sends digital assets to their PhalangX deposit address in a way that our systems do not credit automatically. Recovery is a manual service, so it takes time, carries a fee and is not always possible.

1. My deposit has not arrived. Is it a mis-sent deposit?

Not always. First check the transaction on the sending platform. Most deposits are credited after the number of network confirmations shown on the deposit page, which can take up to 2 hours at busy times. If the transaction is still pending on the network, PhalangX cannot speed it up. You only need this article if the transaction is complete on the network but your PhalangX balance has not changed after 2 hours.

2. Which kinds of mis-sent deposit can be recovered?

We sort every request into one of three categories. The category decides the fee, the minimum value and the target time.

- **Category A – missing or wrong memo tag.** A supported asset was sent on the correct network, but the memo tag (also called destination tag) was left out or mistyped. Fee: 300 baht. No minimum value. Target: 5 business days.
- **Category B – supported asset on the wrong network.** A supported asset was sent on a network that PhalangX does not list for that asset, but where we still control the private key of the receiving address. Fee: 1,500 baht. Minimum value: 3,000 baht. Target: 15 business days.
- **Category C – unsupported asset.** A token that PhalangX does not list at all was sent to a PhalangX address. Fee: 2,500 baht or 5 % of the recovered value, whichever is higher. Minimum value: 10,000 baht. Target: 30 business days.

Values are measured in Thai baht at the PhalangX reference price at 00:00 on the day we receive your complete request. For Category C tokens with no PhalangX price, the Deposit Recovery Desk uses the average price on two independent public markets.

> **Note.** Deposits sent to a smart-contract address, to an address on a network where PhalangX holds no keys, or to a mistyped address that does not belong to PhalangX cannot be recovered in any category. We will tell you this within 3 business days and no fee is charged.

3. I used an old deposit address. What happens?

All customer deposit addresses were rotated on 1 July 2026. Deposits sent to a retired address within 90 days of the rotation (up to and including 28 September 2026) were credited automatically without a

Fictional document created for testing a question-answering system. All names, figures and organisations are invented.

request. Deposits sent to a retired address after that date are handled as Category B requests, but the minimum value does not apply to them.

4. How do I submit a recovery request?

1. Log in to the PhalangX app or website and open Help Centre, then Deposits, then "Recover a deposit".
2. Enter the asset, the network you used, the amount and the transaction hash (TXID).
3. Upload a screenshot of the withdrawal record from the sending platform that shows the destination address and, for memo-based networks, the memo field.
4. Confirm the request with your 6-digit two-factor code. You will receive a case number beginning with "DR-".

Requests must be submitted within 60 days of the network transaction date. Until 31 May 2026 the limit was 30 days; the longer limit applies to every request received from 1 June 2026. Target times start only when the Deposit Recovery Desk confirms that your request is complete, so a missing screenshot or wrong TXID delays the case.

5. Who works on my case?

The Deposit Recovery Desk, led by Kanlaya Meesuk, Head of Deposit Recovery, checks your evidence, assigns the category and keeps you updated by in-app message. The actual transfer out of the affected address is prepared and signed by the Wallet Security Team, because it needs access to our offline key storage. Category C recoveries with a value above 50,000 baht must also be approved by the Wallet Security Committee, which meets every Tuesday. The Desk does not have the authority to approve these cases on its own.

6. How is the fee charged?

The fee is charged only if the recovery succeeds. It is deducted from the recovered asset before the balance is credited, so you do not need to hold baht in your account. If the recovered value turns out to be lower than the fee, we decline the case and charge nothing. Network fees for the recovery transfer are paid by PhalangX and are already included in the fee.

7. Can I use my account while the case is open?

Yes. Trading, deposits and withdrawals of all other assets continue as normal. After a successful recovery, the recovered asset is credited to your Spot wallet and can be traded at once, but it cannot be withdrawn for 24 hours.

8. My request was declined. Can I appeal?

You may appeal within 14 days of the decline message. Appeals are reviewed by Worawit Thanapong, Customer Complaints Officer, who is independent of the Deposit Recovery Desk. Open the case in the Help Centre and choose "Appeal this decision", explaining which fact you believe was assessed wrongly. You will receive a written reply within 10 business days. A declined case can be appealed only once.
